

Computer Networks (UE22CS252B)

Mini Project (Socket Programming)

Cryptographic Reverse String Communication Protocol

Group Number: 22

Teammates

Siri N Shetty : PES2UG22CS556

Soham Pravin Salunke : PES2UG22CS565

(Semester-4 Section-J)

*Programming Language used: **Python***

Server Code:

```
1 import socket
2 import ssl
3
4 def perform_operation(operation, data):
5     if operation == 1:
6         return data[::-1]
7     elif operation == 2:
8         return data.upper()
9     elif operation == 3:
10        return data.lower()
11    elif operation == 4:
12        names = data.split()
13        initials = ''.join([name[0].upper() for name in names])
14        return initials
15    else:
16        return "Invalid operation"
17
18 def main():
19     host = '127.0.0.1'
20     port = 12000
21
22     context = ssl.create_default_context(ssl.Purpose.CLIENT_AUTH)
23     context.load_cert_chain(certfile='cert.pem', keyfile='private_key.pem') # Adjust file paths as necessary
24
25     with socket.socket(socket.AF_INET, socket.SOCK_STREAM) as server_socket:
26         server_socket.bind((host, port))
27         server_socket.listen(5)
28         print(f"Server listening on {host}:{port}")
29
30         while True:
31             client_socket, addr = server_socket.accept()
32             with context.wrap_socket(client_socket, server_side=True) as secure_socket:
33                 print('Got connection from', addr)
34
35                 data = secure_socket.recv(1024).decode()
36                 print("Received from the client:", data)
37
38                 operation_choice = int(secure_socket.recv(1024).decode())
39                 print("Operation choice from the client:", operation_choice)
40
41                 result = perform_operation(operation_choice, data)
42
43                 secure_socket.sendall(result.encode())
44
45 if __name__ == '__main__':
46     main()
47
```

Client Code

```
1 import socket
2 import ssl
3
4 def get_user_input():
5     print("Select operation:")
6     print("1) Reverse the string")
7     print("2) Capitalize the entire string")
8     print("3) Decapitalize the entire string")
9     print("4) Display initials of the person (assuming the string is a name)")
10    choice = input("Enter your choice (1-4): ")
11    return int(choice)
12
13 def main():
14     host = '127.0.0.1'
15     port = 12000
16
17     context = ssl.create_default_context()
18     context.check_hostname = False
19     context.verify_mode = ssl.CERT_NONE # Only for self-signed certs
20
21     with socket.create_connection((host, port)) as sock:
22         with context.wrap_socket(sock, server_hostname=host) as secure_socket:
23             message_to_send = input("Enter a string: ")
24             secure_socket.sendall(message_to_send.encode())
25             print(f"Sent to server: {message_to_send}")
26
27             operation_choice = get_user_input()
28             secure_socket.sendall(str(operation_choice).encode())
29
30             result = secure_socket.recv(1024).decode()
31             print(f"Result from server: {result}")
32
33 if __name__ == '__main__':
34     main()
35
```

The screenshots of the server and client:-

1. Server when it is running and waiting for client to connect:-

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS

PS D:\Semester4\CN\Team22_Soham_Siri> python server.py
Server listening on 127.0.0.1:12000
█
```

2. Client is running to connect to a server:-

```
D:\Semester4\CN>cd Team22_Soham_siri

D:\Semester4\CN\Team22_Soham_Siri>python client.py
Enter a string: █
```

3. Server received a connection from client:-

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS

PS D:\Semester4\CN\Team22_Soham_Siri> python server.py
Server listening on 127.0.0.1:12000
Got connection from ('127.0.0.1', 50129)
█
```

4. Input strings are given in the client:-

```
D:\Semester4\CN>cd Team22_Soham_siri

D:\Semester4\CN\Team22_Soham_Siri>python client.py
Enter a string: This project has been done by Soham and Siri
Sent to server: This project has been done by Soham and Siri
Select operation:
1) Reverse the string
2) Capitalize the entire string
3) Decapitalize the entire string
4) Display initials of the person (assuming the string is a name)
Enter your choice (1-4): 1
Result from server: iSi dna mahoS yb enod neeb sah tcejorp sihT
```

5. Server shows the string received by server:-

```
PROBLEMS  OUTPUT  DEBUG CONSOLE  TERMINAL  PORTS

PS D:\Semester4\CN\Team22_Soham_Siri> python server.py
Server listening on 127.0.0.1:12000
Got connection from ('127.0.0.1', 50129)
Received from the client: This project has been done by Soham and Siri
Operation choice from the client: 1
█
```

Other Features:

```
D:\Semester4\CN\Team22_Soham_Siri>python client.py
Enter a string: hello world
Sent to server: hello world
Select operation:
1) Reverse the string
2) Capitalize the entire string
3) Decapitalize the entire string
4) Display initials of the person (assuming the string is a name)
Enter your choice (1-4): 2
Result from server: HELLO WORLD
```

```
D:\Semester4\CN\Team22_Soham_Siri>python client.py
Enter a string: HeLLo World
Sent to server: HeLLo World
Select operation:
1) Reverse the string
2) Capitalize the entire string
3) Decapitalize the entire string
4) Display initials of the person (assuming the string is a name)
Enter your choice (1-4): 3
Result from server: hello world
```

```
D:\Semester4\CN\Team22_Soham_Siri>python client.py
Enter a string: John Doe
Sent to server: John Doe
Select operation:
1) Reverse the string
2) Capitalize the entire string
3) Decapitalize the entire string
4) Display initials of the person (assuming the string is a name)
Enter your choice (1-4): 4
Result from server: JD
```
